

The file "Data_Scripts.zip" has the data set of the paper:

"On the need of a unified methodology for processing Schumann resonance measurements"

published in the Journal of Geophysical Research - Atmospheres.

When this file is uncompressed, the folder "Data_Scripts" will appear. It contains two other folders:

- "Data": with all the data files used in the paper
- "Scripts": Python programs that produce the figures of the paper

This data set is associated to the research project FIS2017-90102-R, financed by the Spanish Ministry of Economy and Competitiveness (MINECO), co-financed by the European Regional Development Fund (ERDF):

"Numerical and experimental study of the Troposphere-Magnetosphere-Ionosphere coupling by means of Schumann Resonance analysis. Application to climate and Space Weather",

and its use is prohibited, unless expressly authorised by the project research group.
