1. Introduction

The Arqus European University Alliance, which was formally established in Brussels on 27 November 2018, brings together the universities of Bergen, Granada, Graz, Leipzig, Lyon, Padova and Vilnius. A multilateral alliance of internationalized institutions that aspires to consolidate a joint governance structure to achieve a high level of integration in its members' policies and action plans for 2025 due to their prior experience in cooperation in order to:

- Enhance the education of critically engaged European and global citizens who are able and willing to contribute to a multicultural, multilingual and inclusive Europe which is open to the world;
- Increase and improve the joint research capacity of the partner universities;
- Better respond to the grand societal challenges of the 21st century in Europe and beyond.¹

There a total of six action lines to reach this level of integration and achieve excellence in education and research. One of them is "*Research Support and Early Stage Researcher Development*", which is coordinated by the Research Board, chaired by University of Graz. Its main objectives are:

- I. share best practice in research management and support;
- II. study the feasibility of sharing resources;
- III. promote joint doctoral initiatives and promote shared opportunities.

Among its planned activities the first one is *ClusterMap, an in-depth analysis of the status quo of research connections within the cluster (alliance)*. So as part of that activity this report offers a initial study to observe their research status and collaborations for last 10 years. The main goals of the report are:

- Analyse the general research profile and publication trend of ARQUS' universities.
- Study the collaborations between universities and identify which are their main and common research areas in order to facilitate and promote collaborations between them.
- An in depth analysis of the the universities publication and specialization profiles according to areas and disciplines
- Identify and map oustanding researcheres with the objective of stablish a directory that facilite future collaborations

To meet these objectives we have planned to deliver two reports. Table 1 shows the details of these reports.

¹ <https://www.arqus-alliance.eu/action-lines/research-support>

Table 1. Report's calendar and deliverables

	I. General data collaboration	II. Publications profiles and research Excellence
Description	Analyze the universities' positions in international rankings, research profile and main collaborations taking into account their research categories	Analyze the publication profile of the different universities. In this way, common research areas will be established. Likewise, the most relevant researchers from each university will be identified
Deadline	15 January 2020	15 March 2020
Highlights	Production trends and main collaborations by areas	Main specialization disciplines by universities. Directory of outstanding researchers
Data	Available	Available

2. Methodology

Information sources

The data for the position in international rankings has been obtained from ARWU, is the measure of the most prestigious universities globally. Since 2003 it has been evaluating the general performance of higher education institutions around the world and since 2017 it also provides specific analysis in 54 areas of knowledge, a classification that always precedes the publication of the general ranking that appears every year in mid-August.

ARWU uses six objective indicators to rank world universities, including the number of alumni and staff winning Nobel Prizes and Fields Medals, number of highly cited researchers selected by Clarivate Analytics, number of articles published in journals of Nature and Science, number of articles indexed in Science Citation Index - Expanded and Social Sciences Citation Index, and per capita performance of a university. More than 1800 universities are actually ranked by ARWU every year and the best 1000 are published.

For the publications data we used Web of Science's InCites, a database focus on organizations that makes it simple to analyse their activity and benchmark it against other ones. This selection is also due to its data quality, highlighting the organizations unification, coverage, including all publications in the Web of Science Core Collection, and access to citation, metrics and collaboration data.

In December 2019 we retrieved all universities publications indexed in InCites from 2010 to 2019, including Emerging Sources Citation Index, and filtering by document type (only articles, reviews and letters). In order to guarantee the correct downloading each dataset

was sent to the respective university managers, who verified that there were no errors in the data. So, for the InCites query, each university is composed of the following organizations:

- **Bergen** - University of Bergen
- **Granada** - University of Granada
- **Graz** - University of Graz
- **Leipzig** - University of Leipzig
- **Lyon** - Université Claude Bernard Lyon 1 + Université Jean Moulin Lyon 3 + Université Jean Monnet + ENS Lyon
- **Padua** - University of Padua
- **Vilnius** - Vilnius University + Vilnius University International Business School

All data collected for this report are available in a figshare project:

https://figshare.com/projects/ARQUS_ClusterMap_in-depth_analysis_of_the_status_quo_of_research_connections_within_the_cluster/74190. Every part has been divided into different dataset:

1. Part I - <https://doi.org/10.6084/m9.figshare.11620059.v1>

Bibliometric indicators

Main Indicators:

- Number of Documents: number of articles, reviews indexed in Web of Science.
- Category Normalized Citation Impact The Category Normalized Citation Impact (CNCI) of a document is calculated by dividing the actual count of citing items by the expected citation rate for documents with the same document type, year of publication and subject area. When a document is assigned to more than one subject area, an average of the ratios of the actual to expected citations is used. The CNCI of a set of documents, for example, the collected works of an individual, institution, or country, is the average of the CNCI values for all the documents in the set.

Complementary indicators:

- The Highly Cited Papers indicator shows the volume of papers that are classified as highly cited in the Clarivate Analytics service known as Essential Science Indicators (ESI). Highly Cited Papers in ESI are the top one percent in each of the 22 subject areas represented in the Web of Science, per year. They are based on the most recent 10 years of publications. Highly Cited Papers are considered to be indicators of scientific excellence and top performance and can be used to benchmark research performance against field baselines worldwide.
- Documents in Q1 – Q4. Number of documents that appear in a journal in a particular Journal Impact Factor Quartile in a given year. For instance, if a value of 100. is displayed, it

indicates that 100 documents in the set were published in journals of the specified Journal Impact Factor Quartile in that year.

- **Collaboration.** Papers that contain one or more international co-authors. The % of International Collaborations is the number of International Collaborations for an entity (as described above) divided by the total number of documents for the same entity represented as a percentage. The % of International Collaborations is an indication of an institution or author's ability to attract international collaborations.

Research areas schemas

- **GIPP Research Areas.** A very broad categorization. The GIPP schema comprises six broad disciplines but covers all fields of scholarly research. The GIPP schema is based on an aggregation of the Web of Science subject categories and contains significant overlap between disciplines. Initially developed as part of the Thomson Reuters Institutional Profiles project, the GIPP schema is also used in the Times Higher Education World University Rankings.
- **Web of Science Research Areas.** The Web of Science scheme comprises approximately 250 subject areas in science, social sciences, and arts & humanities. Many broad areas such as physics and materials science are represented by smaller subfields. Selecting subject areas from this list enables you to make comparisons in targeted areas such as Applied Chemistry or Geriatrics & Gerontology. To see the journals assigned to each category, click one of the following links:

3. General view

3.1 Position in international rankings

The data have been obtained from the Academic Ranking of World Universities (ARWU).

Table 1. Position in international rankings ARQUS Alliance. General

4. Individual research profiles and trends

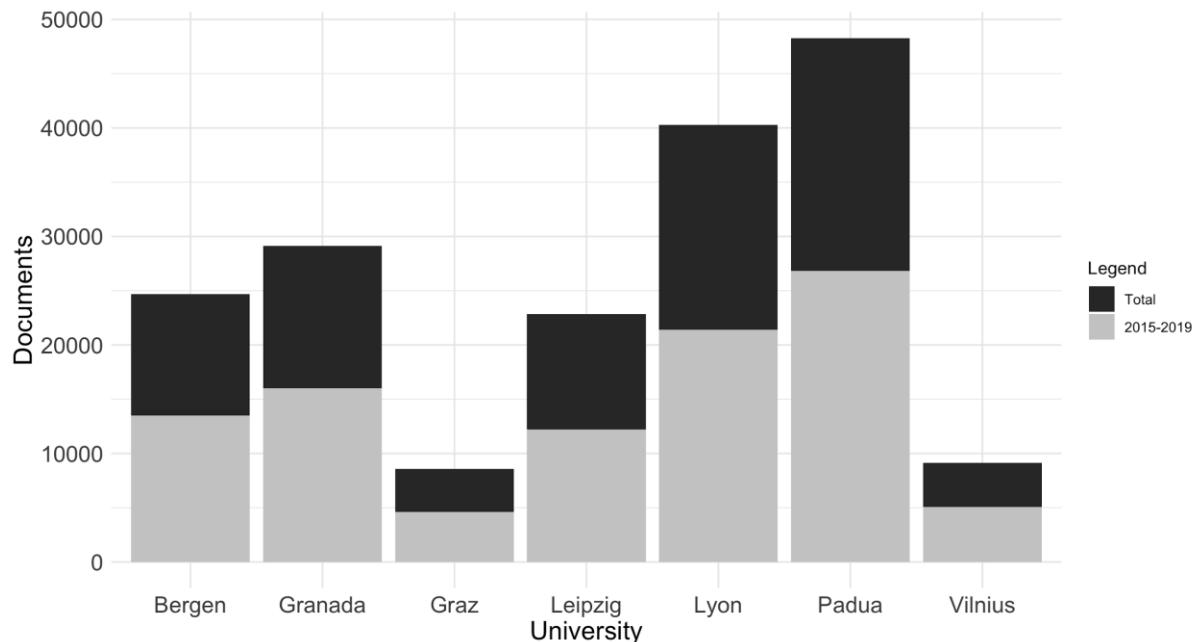

In the following tables, you can see the data of the main indicators of scientific production for each university, in different periods of time and for each of the areas analyzed, including the different disciplines and a brief initial summary. In addition, the analyzed data is represented graphically.

Summary

Table 7. Main bibliometric Indicators ARQUS Alliance

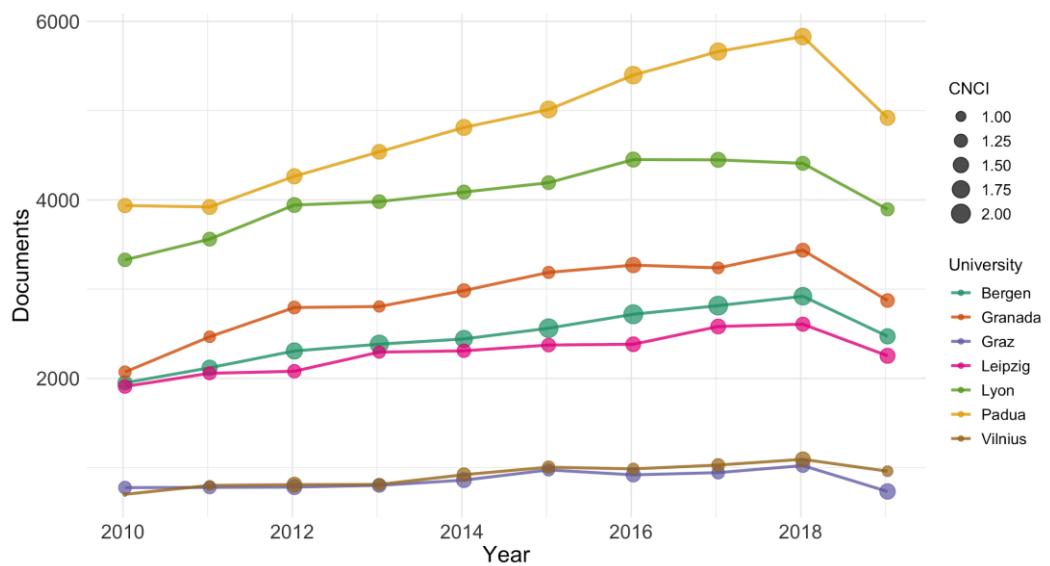

University	Nr citable Documents	Category Normalized Citation Impact	Nr and % Documents in Q1	Nr & % Highly Cited Papers	Nr and % International Collaboration
Period: 2010-2019					
University of Bergen	24687	1,75	9651 - 53,33%	573 - 2,32%	15590 - 63,15%

PHOTO: Commissioned by Isabel and Fernando (the "Catholic Monarchs") in 1504, the Royal Hospital was designed by the architect Enrique Egas and building started in 1511. Over the years, it was used for a variety of purposes. Originally, it served as a hospital for the poor, pilgrims and soldiers who had been injured during the conquest of Granada. After 1536, however, it was also used as a prison for mad people, and San Juan de Dios was kept here for a time when he was considered to be insane. At a later date, it was also used to treat people from all over Spain who were suffering from venereal diseases (and syphilis in particular). It was one of the first buildings which the monarchs built in Granada and was situated outside the city walls. The building has now been taken over by the University of Granada and is the seat of the Vice-chancellor's Office and other university services.
