INTRODUCTION

World Sarcophagidae-fauna consists from 407 genera and 2896 species, including subfamilies Macronychiinae (1 genus, 21 species), Miltogramminae (58 genera, 675 species), Eumacronychiinae (7 genera, 43 species), Paramacronychiinae (19 genera, 82 species) and Sarcophaginae (322 genera, 2075 species) (original data). Sarcophagid flies are distributed in all continents, with the exception of both Arctic and Antarctic. This paper contains an analysis an annotated compilation of relevant taxonomic and faunistic data for 105 genera and 343 species of Sarcophagidae from the People's Republic of China (in subsequent text given as "China"), Taiwan and Tibet.

In the present review I have attempted to complete analyse of all relevant literature data on the fauna of Sarcophagidae from China, Taiwan and Tibet and to bring the list of species into accordance with the system of this family, elaborated by ROHDENDORF (1937, 1965, 1967), LOPES (1969, 1982), VERVES (1987, 1990, 1997a, b), POVOLNÝ & VERVES (1997), and VERVES & KHROKALO (2006a, b) with some corrections according to BUENAVENTURA & PAPE, 2017. The previous total lists of Chinese (including Tibet) and Taiwan species were published at the end of the 20th century or early in the 21st century (FAN, 1992; FAN & PAPE, 1996; KURAHASHI *et al.*, 2017; LIN & CHEN, 1999; SUGIYAMA *et al.*, 1987; XIAO, 2010; XUE W. & CHAO, 1996; ZHANG & FAN, 1993; ZHANG & ZHAO, 1993). An original analysis of main faunistic publications of China, Taiwan and Tibet up to the first half of 2019 is made in this review. Family and generic-groups names are adopted after SABROSKY (1999). Abbreviations of the names of zoogeographical regions are: Or – Oriental; Pa – Palaearctic.

LIST OF SPECIES

Subfamily Macronychiinae Brauer & Bergenstamm, 1889

Macronychiidae Brauer & Bergenstamm, 1889: 76, 117.

1. Genus *Macronychia* Rondani, 1859

Macronychia Rondani, 1859: 222, 229. Type species: *Macronychia agrestis*: Rondani, 1859 (= *Xysta striginervis* Zetterstedt, 1838) [misidentification: not *Tachina agrestis* Fallén, 1810].

Macronychia: FAN, 1992: 583; PAPE, 1996: 94; TOWNSEND, 1931: 379; VERVES, 1982a: 236; 1986: 59; VERVES & KHROKALO, 2006a: 221, 228; 2006b: 73, 79.

Kozlovea yangiana Lehrer, 2010a: 26, syn. nov. Type locality not given.

Comment: The description of *Kozlovea yangiana* is based on drawings of male genitalia of *Kozlovea lopesi* after FAN, 1992 (p. 640, figs A84-A86) only. The differences in drawings of FAN and other authors (NANDI, 1976 etc.) are very petty and reflect the different styles of painters; they should not be used as base for designation of a new species.

Comment: The description of *Myorhina altainula* is based on drawings of male genitalia of *Thyrsocnema villeneuvei* after ROHDENDORF, 1937 (p. 180, figs 251-252) only. The differences in drawings of Rohdendorf and other authors (FAN, 1992 etc.) are very petty and reflect the different styles of painters; they should not be used as base for designation of a new species.

Comment: The description of *Jantiella bentenia* is based on drawings of male genitalia of *Parasarcophaga (Jantiella) doleschalli* after FAN, 1992 (p. 640, fig. 1376) only. The differences in drawings of FAN and other authors (JOHNSTON & TIEGS, 1921 etc.) are very petty and reflect the different styles of painters; they should not be used as base for designation of a new species.

Seniorwhitea fuhsia Lehrer, 2008h: 29, syn. nov. Type locality not given.

Comment: The description of *Seniorwhitea fuhsia* is based on drawings of male genitalia of *Seniorwhitea orientalooides* after FAN, 1965 (p. 259, figs 1011-1012) and *Seniorwhitea reciproca* after FAN, 1992 (p. 692, fig. 1364) only. The differences in drawings of FAN and other authors (ROHDENDORF, 1937 etc.) are very petty and reflect the different styles of painters; they should not be used as base for designation of a new species.

DISCUSSION

The results of studying of sarcophagids of People's Republic of China, Tibet and Taiwan are presented in Appendix 1. The differences in sizes and natural conditions of different administrative unites are unreliable for constatation of real degree of studying of their faunas. Total number of sarcophagids' species is 343, i. e. for People's Republic of China – 315, for Tibet – 34 and Taiwan – 63. Only Taiwan fauna is known detaily; other two faunas have been studied not more than about of 80-90%. The number of known species from Palaearctic part of China (267) more than twice exceeded as such from Oriental part (128). The largest numbers of species are known from Neimenggu (92), Sichuan (87), Liaoning (84), Xinjiang (75), Yunnan (73), Shanxi (61), Jilin (58), and Guangdong (53). Those datae compose from 25 to 46 species for majority of provinces, and below 20 only for 4 ones: Jiangxi (17), Hong Kong (16), Anhui (8), and Tianjin (6).

ACKNOWLEDGMENT

I wish to express my sincere thanks to my friend and colleague, Dr. Sci., Prof. Wanqi XUE (Institute of Entomology, Shenyang Normal University, Shenyang, China) for sending of the literature necessary to compile the present catalogue and standing collaboration, and to all reviewers for detailed text check review and numerous corrections of text.
